

September 30, 2009

The Honorable David Obey  
Subcommittee on Labor-HHS-Education  
2314 Rayburn House Office Building  
Washington, DC 20515

The Honorable Todd Tiaht  
Subcommittee on Labor-HHS-Education  
2441 Rayburn House Office Building  
Washington, DC 20515

Dear Chairman Obey and Ranking Member Tiaht:

On behalf of the undersigned organizations, we are writing to urge you to support the House-passed **funding level for viral hepatitis prevention of \$20.1 million** in the final FY2010 Labor-HHS-Education Appropriations bill. While the viral hepatitis community has identified a funding need of \$50 million in FY2010, we believe this small increase of \$1.8 million over the current budget of \$18.3 million is a first step in restoring the viral hepatitis program at the Centers for Disease Control and Prevention (CDC) to its FY2001 funding level of \$25 million. We support the House and Senate's complementary report language and the Senate's request for a professional judgment budget for viral hepatitis. A transparent and full picture of CDC's budget for viral hepatitis and the articulation of the resources necessary for a prevention program that would actually provide prevention services have long been in order. While we appreciate the House report language encouraging CDC to target the \$1.8 million increase to test and identify chronically infected persons and to help establish chronic viral hepatitis state surveillance systems, this level of funding is insufficient for the CDC to do so.

Hepatitis B and C affect at least six million Americans, the vast majority of whom do not know they are infected. Viral hepatitis can lead to chronic liver disease, cirrhosis, liver cancer and liver failure and each year, these complications claim 15,000 lives. The viral hepatitis community has asked for \$50 million for awareness, prevention and control initiatives, to boost CDC's Division of Viral Hepatitis (DVH) current funding of \$18.3 million, a woefully insufficient amount to address this crisis. While operating on the smallest Division budget for the prevention of infectious diseases within CDC, DVH cannot prevent and manage these epidemics under its current fiscal constraints. States and cities receive a total of \$5 million, which averages to a \$90,000 award per state. This is only enough for a single staff position, far less than what is needed for the provision of core prevention services including hepatitis B and C education, counseling, testing, and referral, in addition to delivering the hepatitis A and B vaccines, and establishing a surveillance system for chronic hepatitis B and C.

It is absolutely essential and urgent that we act aggressively to address the rising death rate caused by viral hepatitis and the rising incidence rate of viral hepatitis among disproportionately impacted groups in the United States. In 2007 alone, the CDC estimated that 43,000 Americans were newly infected with hepatitis B and 17,000 with hepatitis C. Most people living with hepatitis B and over three-fourths of people living with hepatitis C are unaware that they are infected. Further, the baby boomer population currently accounts for two out of every three cases of chronic hepatitis C. As these Americans continue to age, they are likely to develop complications from hepatitis C and require expensive medical interventions. Unfortunately, it is believed that these estimates of hepatitis B and C infections are just the tip of the iceberg, since we lack sufficient data in the absence of an adequate surveillance system. It is also estimated that this epidemic will increase costs by billions of dollars to private insurers and public systems of health such as Medicare and Medicaid, and account for additional billions lost due to decreased productivity from the millions of American workers suffering from chronic hepatitis B and C.

A strong public health response is needed to meet the challenges of these costly diseases. The viral hepatitis community welcomes the opportunity to work with you and your staff on this important issue and to gain support for increased resources to prevent this devastating epidemic. Please contact Colin Schwartz with the Hepatitis C Appropriations Partnership at 202.434.8005 or [cschwartz@NASTAD.org](mailto:cschwartz@NASTAD.org) if you have any questions or need additional information.

Sincerely,

*This document was prepared by the Hepatitis C Appropriations Partnership (HCAP). HCAP was formed in June 2004 as a coalition that represents hepatitis community-based organizations, public health officials, health providers, national HIV and hepatitis organizations, and diagnostic and pharmaceutical companies. We work with policy makers and public health officials to increase federal leadership and support for viral hepatitis prevention, testing, education, research, medical management and treatment. For more information, please contact Colin Schwartz at 202.434.8005 or [cschwartz@NASTAD.org](mailto:cschwartz@NASTAD.org).*
